# Eradication of wolves in Europe

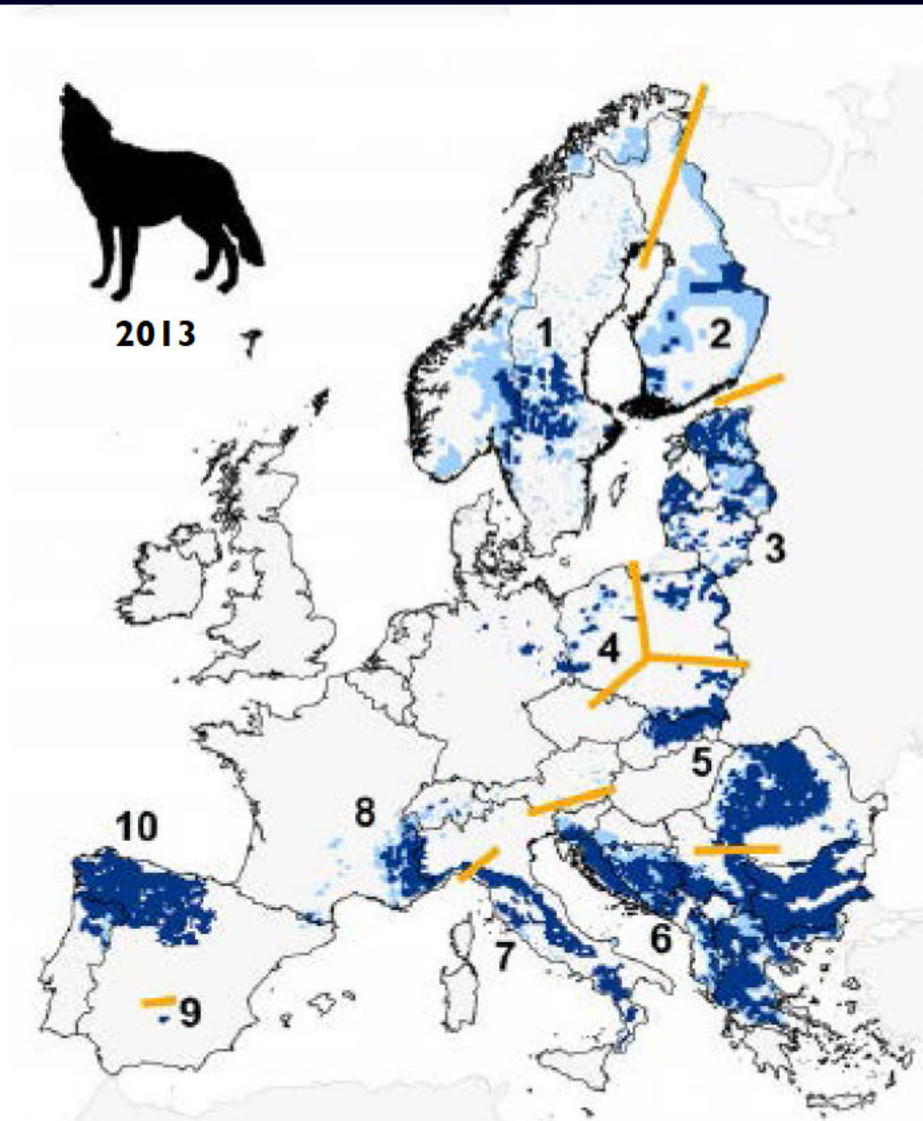

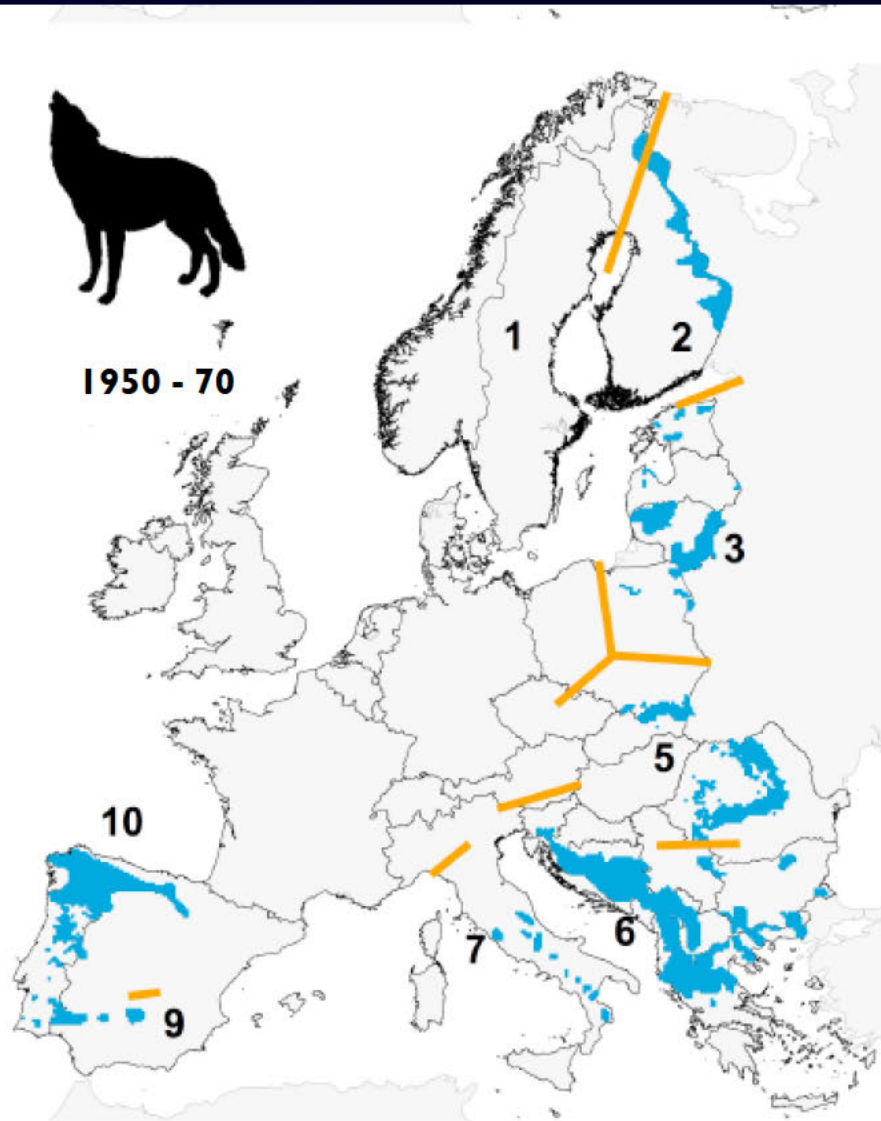

(ranges in 1960s')

# Wolf range trends in Europe 2000s'

# Wolf expansion in Europe 1960-2013

# Wolf distribution in Europe (permanent and sporadic) 2017

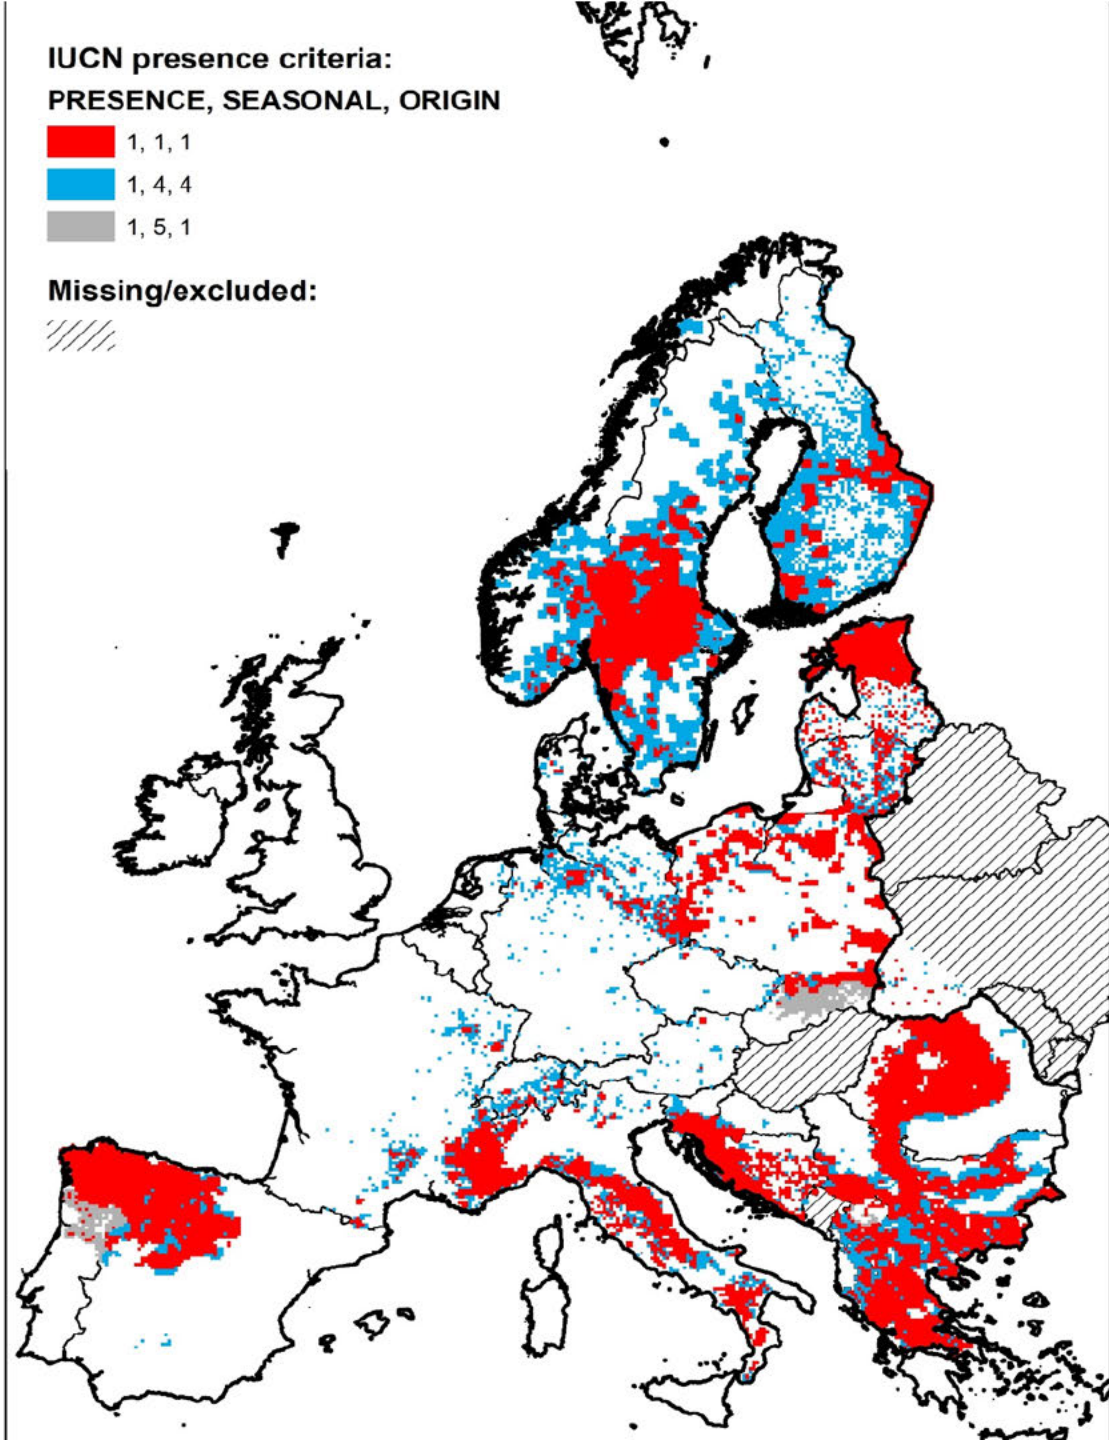

IUCN presence criteria:  
PRESENCE, SEASONAL, ORIGIN

1, 1, 1

1, 4, 4

1, 5, 1

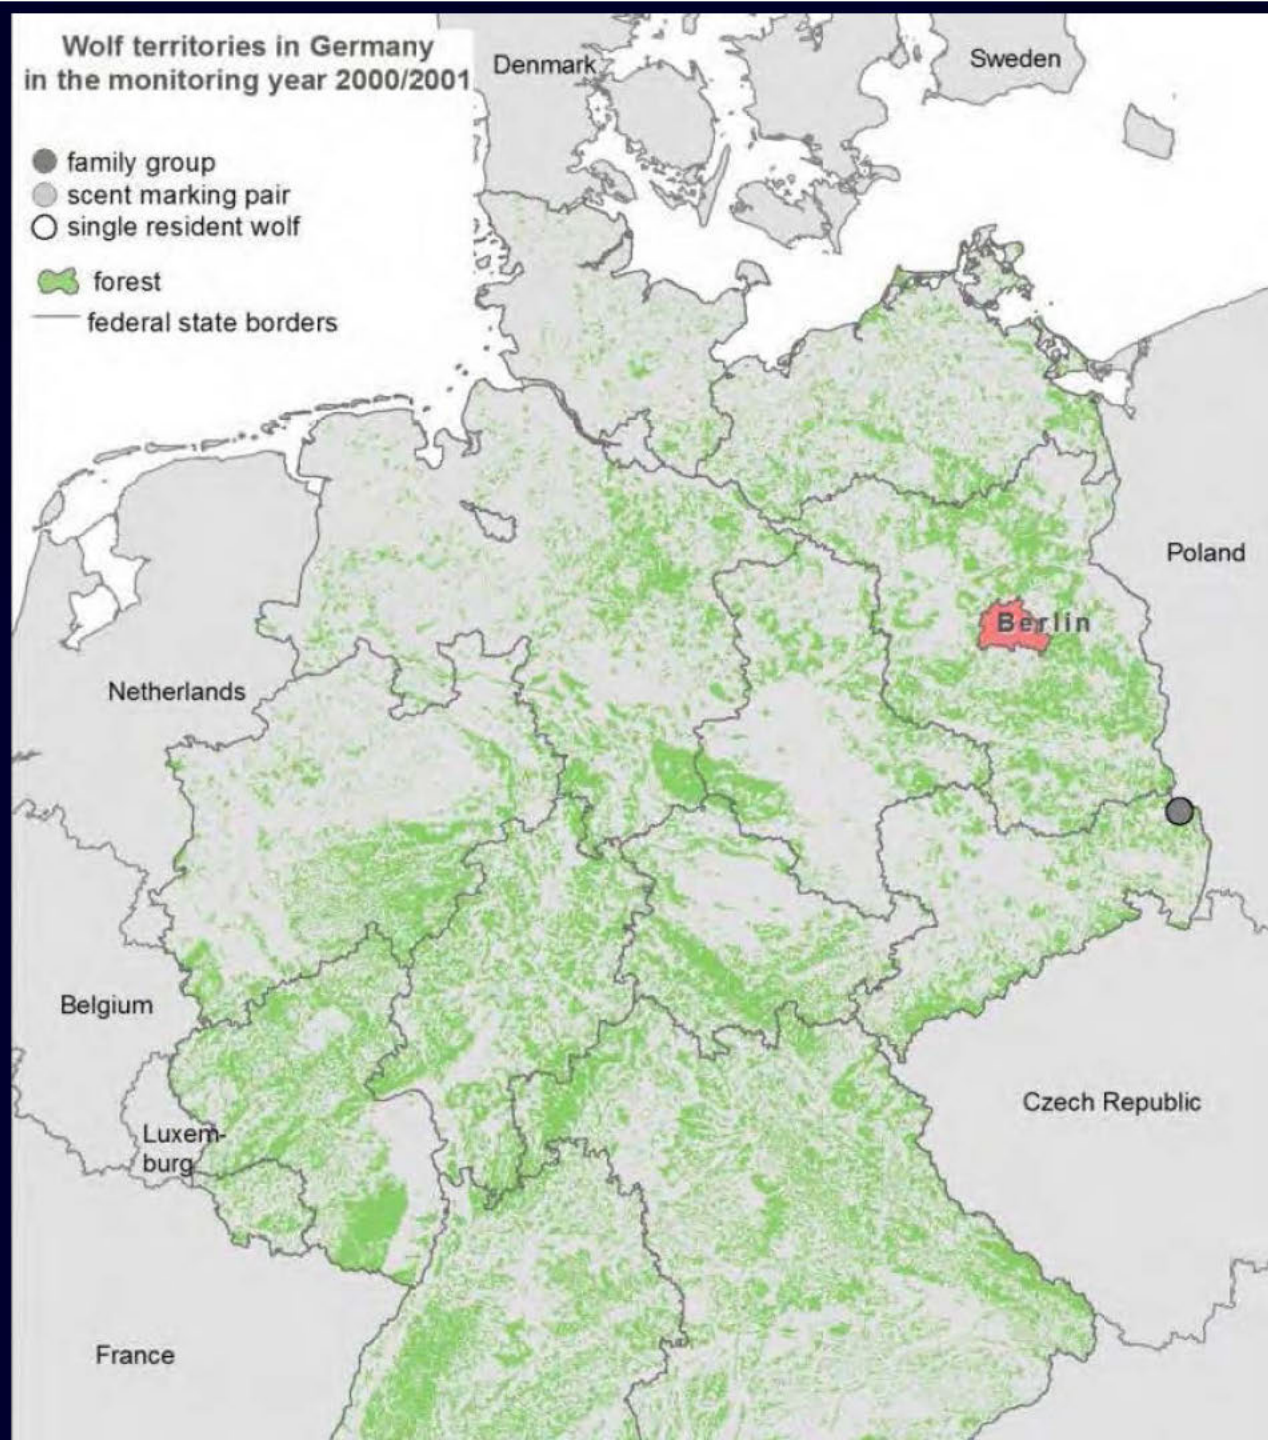

Missing/excluded:

**Distribution of confirmed wolf territories in Germany 2000**  
**1 pack**

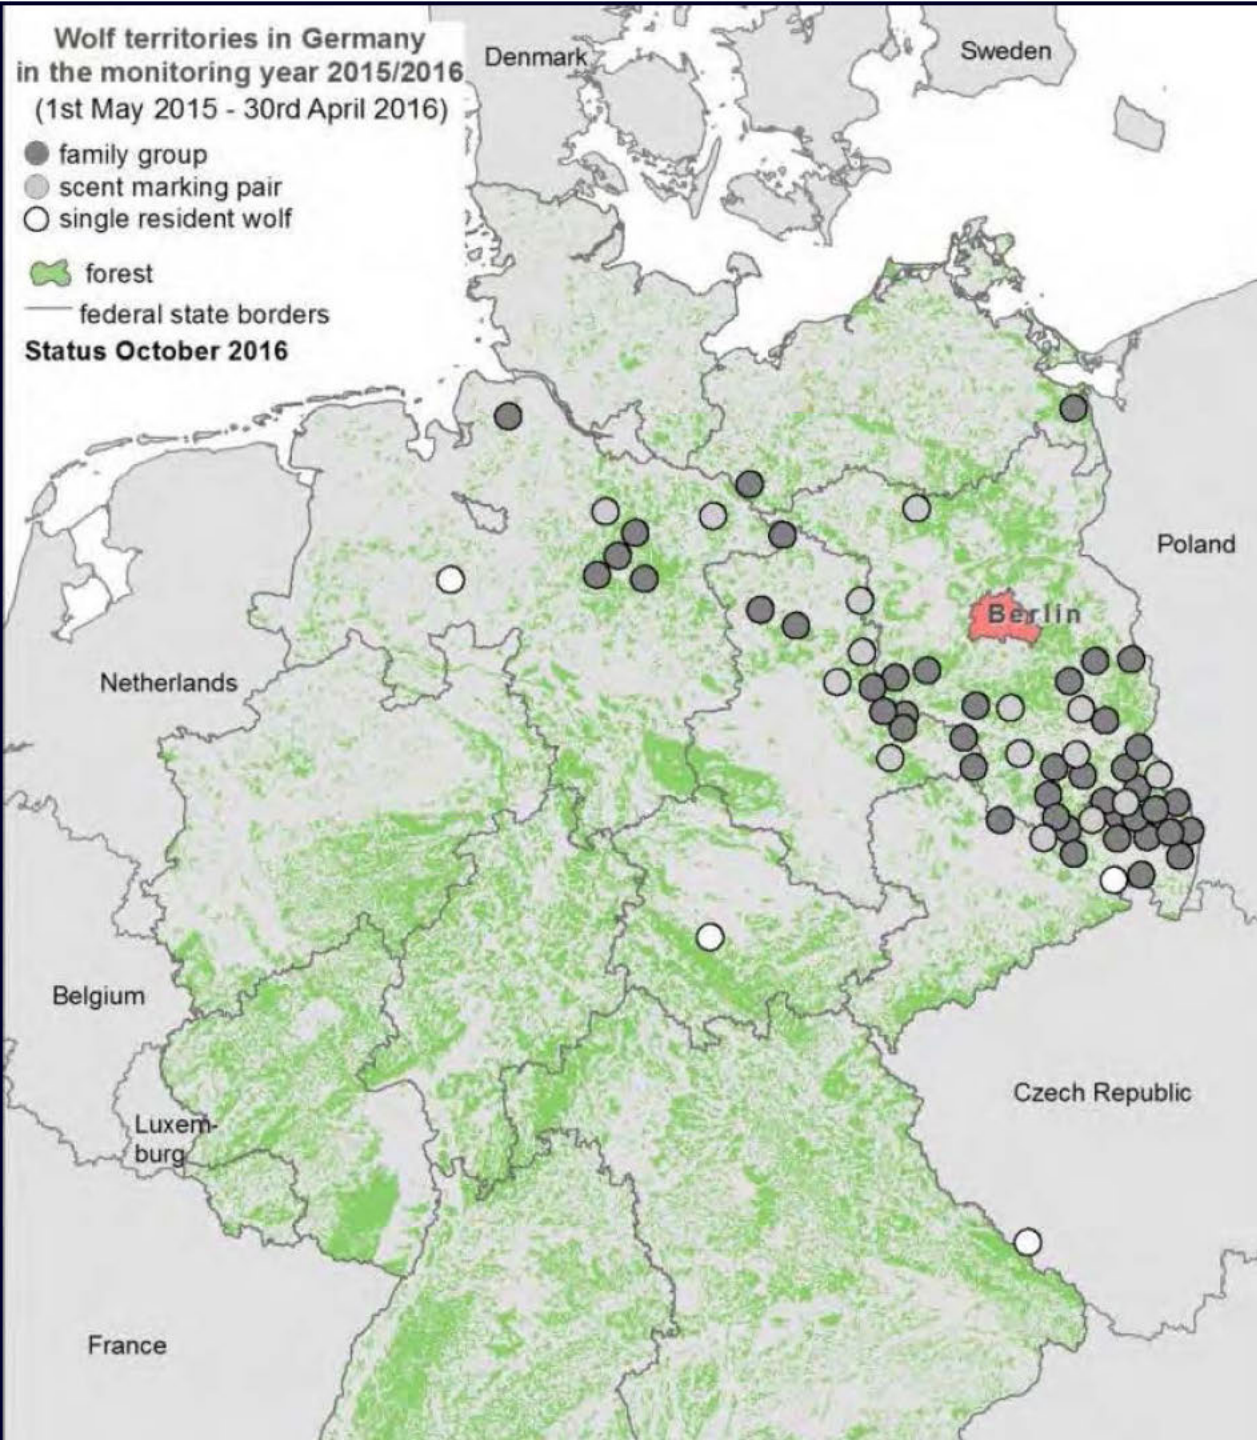

Wolf territories in Germany in the monitoring year 2000/2001

- family group
- scent marking pair
- single resident wolf
- 🌿 forest
- federal state borders

# Distribution of confirmed wolf territories in Germany 2015/2016

**46 packs**  
**15 pairs**  
**4 single resident wolves**

# Distribution of confirmed wolf presence in Germany Nov. 2018

> 70 packs

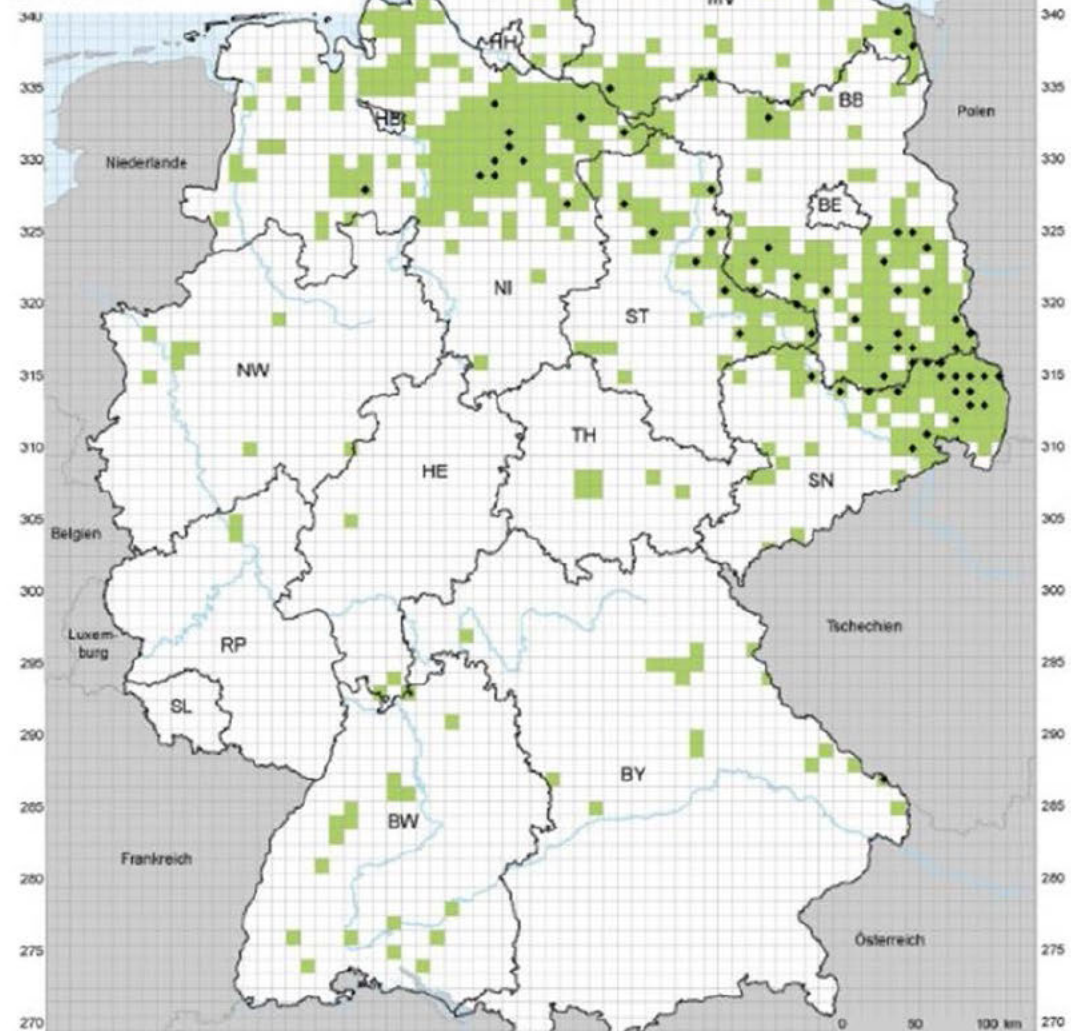

growth:  
34%/year

## Wolfsvorkommen in Deutschland im Monitoringjahr 2017/2018 (1.5.2017 - 30.4.2018)

- 10 x 10 km Raster
- Nachweise gem. Monitoringstandards
- Rasterzelle mit nachgewiesener Reproduktion
- Bundeslandgrenzen

**GREAT DIVERSITY OF METHODS TO ESTIMATE NUMBERS AND RANGES**

# Wolf distribution 2017

- c. 17,000 in Europe
- c. 13 -14,000 in EU
- Increasing in numbers and ranges
- 9 populations
- Vulnerable – Least Concern

# How many Large Carnivores in EU?

- Wolves ~ 14000
- Bears ~ 16000
- Eurasian Lynx ~ 9000
- Wolverine ~ 1300

# Main causes of wolf increase

Disentangling the relative weight of each factor in quantitative and objective way is impossible

- Changes in land use patterns
- Increase in wild prey
- Natural recovery
  
- Changes in human attitudes (?!)
- Legislation (EU and national)

Main cause of wolf increase:

**1. Wolves can live in almost all habitat types and are very tolerant of human landuse**

# Abandonment of Agricultural Lands Across Europe by 2030

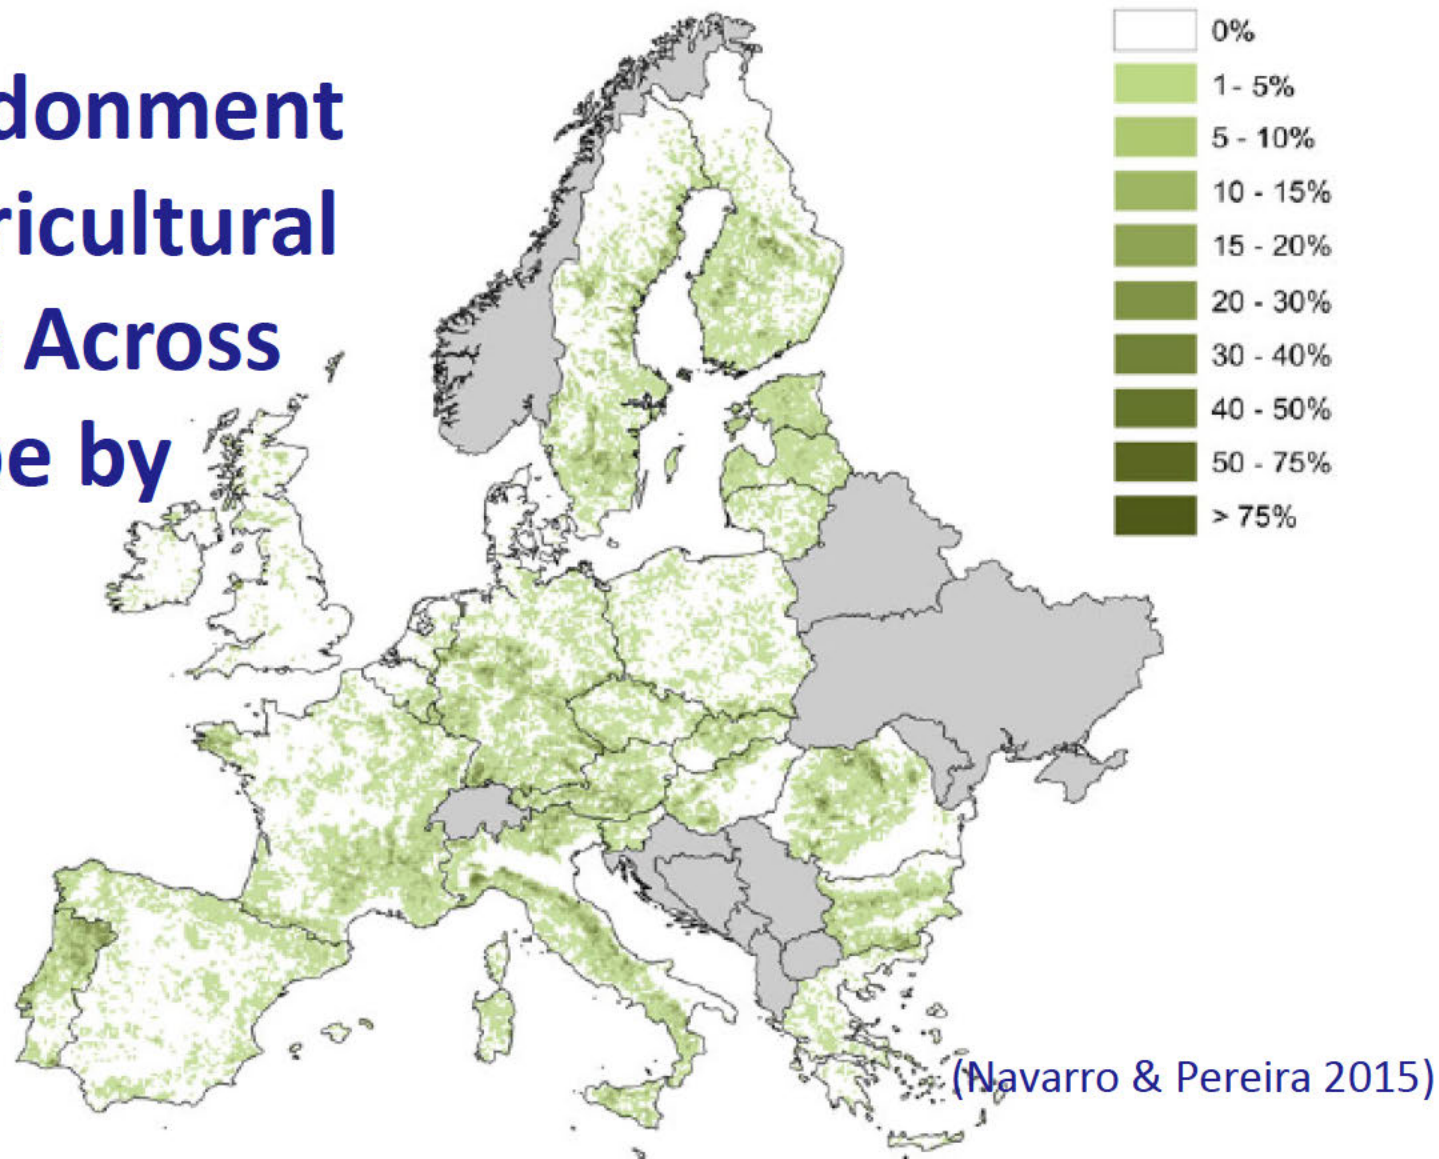

Figure 4. Localization of the hotspots of abandonment and rewilding in Europe. Those hotspots are areas categorized as “agriculture” in 2000 that are projected to become rewilded or afforested in 2030 and that are common to all four scenarios of the CLUE model (Verburg and Overmars 2009). Hotspots are expressed as a percentage of each 10-km<sup>2</sup> grid cell. Agricultural areas correspond to “arable land (non-irrigated)”, “pasture”, “irrigated arable land” and “permanent crops”. Rewilded and afforested areas correspond to “(semi)-natural vegetation”, “forest”, “recently abandoned arable land” and “recently abandoned pasture land”. Countries in *grey* have no data.

Main causes of wolf increase:

2. Wolves long distance dispersal:  
>1500 Km

# La dispersione di Slavo

Source: <http://www.volkovi.si>

## Variability of wolf diet across Europe

Main cause of wolf increase:

**3. Wolves feed on anything edible and the most accessible resource**

# Wolves and hybrids

- Generally less than 5% with isolated events
- Locally up to 75%, e.g. Grosseto (Italy)

# Why conserve wolves
